

PDI/RETAIL SUITE

Customer Focused Retail Management

PDI/Retail enables the convenience store operator to automate and cost-effectively manage complex day-to-day store-level operations. Based on a centralized pricebook, user-defined input forms, and the ability to integrate to multiple POS platforms, PDI/Retail streamlines the electronic flow of information between stores, the central office, vendors, and suppliers.

The PDI/Retail Suite goes beyond simple integration to the PDI/Financial Suite – it is an extension of your home office, fully aware of business changes as they occur, unlike “bolt-together” systems. PDI/Retail and PDI/FocalPoint are equally joined at the hip; combining to monitor data, apply your business-rule exceptions, and automatically report results and alerts for follow-up action.

PDI/Daily Reporting: It's About the Right Choice . . . Yours

Who can design the best electronic “paperwork” forms for your stores? You. That’s why PDI/Retail forms design lets you tailor each site’s paperwork for maximum clarity and efficiency. Who can best identify what constitutes good or bad news for your chain? You. PDI/Daily Reporting lets you define business rules for good and bad news alike so you can focus on what matters. And who knows the best POS system for each store? You again, of course. PDI/Retail supports multiple POS integration options, easing the complexity for multiple POS environments. Using PCATS-NAXML standards, information is combined into one, centralized database so store operations and category management can be managed from a single, robust pricebook.

PDI/Pricebook: The Pricebook with the PDI Difference

PDI/Pricebook was developed with your needs in mind. Powerful authorization features ensure the right product information gets to the right stores at the right time. Category managers can control retails and vendor costs with cost-monitoring exceptions, alerting violations to agreed-to supplier costs.

Store Level Solutions With PDI/Inventory and PDI/Desktop

The PDI/Inventory enables convenience retailers to effectively manage cost, retail, and item-level merchandise and foodservice inventories. Seamless integration with PDI/Store Assistant (PDI’s handheld solution) extends inventory management into the store, where inventory methods can differ by department or store.

PDI/Desktop provides a multi-level menu system, task scheduler, and checklist management toolset. All centrally deployed and controlled by the home office, your store level employees will stay on task while you reduce network security risks!
